

Plastic Abrasive Media

Product Features:

Plastic abrasive media is made of organic materials as the bonds. It has both cone and tetrahedron shape, suitable for fine polishing. In the case of a small amount of abrasion, this media can improve surface finishment. It also has a long service life.

Application Fields:

It's mainly used for treatment of jewelry, precious metal etc. Due to the high-temperature denaturation of organic binder, plastic abrasive media is convenient for the recovery of precious metals.

Types and Usages			
Type	Size, mm	Grit	Application
PYC	5×5, 10×10, 15×15, 20×20, 25×25, 30×30	400#	For coarse polishing
PYM	5×5, 10×10, 15×15, 20×20, 25×25, 30×30	800#	For medium polishing
PYF	5×5, 10×10, 15×15, 20×20, 25×25, 30×30	1200#	For fine polishing
PYS	5×5, 10×10, 15×15, 20×20, 25×25, 30×30	3000#	For super fine polishing
PSC	5×5, 10×10, 15×15, 20×20, 25×25, 30×30	400#	For coarse polishing
PSM	5×5, 10×10, 15×15, 20×20, 25×25, 30×30	800#	For medium polishing
PSF	5×5, 10×10, 15×15, 20×20, 25×25, 30×30	1200#	For fine polishing
PSS	5×5, 10×10, 15×15, 20×20, 25×25, 30×30	3000#	For super fine polishing

Note: Special specification can be customized according to customer's requirements.
